Hands-on STEM Workshop for Middle School Students

Nearly 100 Gen Z students come to campus for a hands-on encounter with emerging technology, an immersion in higher education, and lively lessons teaching soft skills critical for the next generation of transportation technology leaders. Through these various activities lead by professors, college students, and transportation professionals, middle school students get a glimpse into their futures, and leave with renewed confidence and motivation to

continue on their path to be tomorrow's leaders and innovators.

For more information on this and other innovative programming, contact Dr. Victoria Deguzman at VictoriV@usc.edu

METRANS is dedicated to solving metropolitan and transportation problems through **research, education, and outreach.**
