

# METRANS

**FALL 2024** SPEAKER SERIES

**September 25, 2024**  
**12- 1 PM PST**

**USC Price**  
*DUPSA & Urban Growth Seminar Series*

**RGL 100**  
**OR ZOOM**

In collaboration with USC Price's DUPSA & Urban  
Growth Seminar Series

## **Mind the Gap: Estimating Present and Future Heat Exposure on the London Tube**

**Rachel Franklin**

Dr. Franklin is a population geographer with research interests in the sources and impacts of demographic change as it occurs at multiple spatial scales. Demography – age structure, migration patterns, or human capital stocks, for example – is at the core of most social science, health, or environmental challenges facing us. She works at the regional and local scales to understand how best to characterize or measure the populations of places; how location and scale are related to demographic change; and how migration, especially internal, affects demographic composition. Franklin is especially interested in how we use data and statistics to understand what sorts of people are located where, how this changes over time, and what this means for our understanding of spatial inequality. She is currently a Professor of Geographical Analysis in the Centre for Urban and Regional Development Studies at Newcastle University
